

location of a vehicle, the method comprising the steps of:

performing in-vehicle processing of signals to obtain
a fix of vehicle location;

employing a paging request responder to receive a
paging request; and,

in response to the paging request, employing a
communications device separate from the paging request responder
to transmit the fix to a designated service center.

29. (Amended) A method of disclosing the present
location of a vehicle, the method comprising the steps of:

employing a paging request responder to receive a
paging request; and,

in response to the paging request, performing in-
vehicle processing of signals to obtain a fix of vehicle location
and employing a communications device separate from the paging
request responder to transmit the fix to a designated service
center.

30. (Amended) Apparatus for disclosing the present
location of a vehicle, the apparatus comprising:

means for performing in-vehicle processing of signals
to obtain a fix of vehicle location;

a paging request responder for receiving a paging
request; and

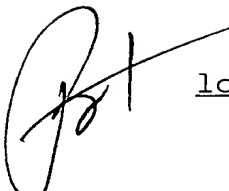

a communications device separate from the paging
request responder and responsive to the paging request for
transmitting the fix to a designated service center.

31. (Amended) Apparatus for disclosing the present location of a vehicle, the apparatus comprising:

a paging request responder for receiving a paging request;

means responsive to the paging request for performing in-vehicle processing of signals to obtain a fix of vehicle location; and

a communications device separate from the paging request responder for transmitting the fix to a designated service center.

 32. (Amended) A method of determining the present location of a vehicle, the method comprising the steps of:

initiating a paging request for transmission to a paging request responder mounted in or on the vehicle; and

in response to the paging request, receiving from a communications device separate from the paging request responder and mounted in or on the vehicle a fix of vehicle location.

33. (Amended) Apparatus for determining the present location of a vehicle, the apparatus comprising:

means for transmitting a paging request to a paging request responder mounted in or on the vehicle; and

means responsive to the paging request for receiving from a communications device separate from the paging request responder and mounted in or on the vehicle a transmission of a fix of vehicle location.
